

Abstract

This invention provides novel PF1270A substance,
PF1270B substance and PF1270C substance represented by the
following formula (1) or pharmaceutically acceptable salts
5 thereof, a method for producing the same and a pharmaceutical
composition which comprises at least one of the same as the
active ingredient. Since a group of the PF1270 substances of
the invention show high affinity for histamine H₃ receptor,
they are expected as novel histamine H₃ receptor ligands
10 useful as medicaments.
